LABORATORY EXERCISE 40 BLOOD VESSEL STRUCTURE, ARTERIES, AND VEINS

Instructional Suggestions

If live frogs are not available for the microscopic observation of blood vessels, you might want to provide small goldfish. The head of a fish can be wrapped loosely in wet cotton to keep its gills moist, and the fish can be placed on a glass plate on the stage of a microscope. If its tail is spread out beneath the microscope slide, the blood vessels can be observed with low- and high-power magnification. However, if the fish is not returned to water within a few minutes, it will likely die.

Figure Labels

FIG. 40.1

2.

1. Tunica interna

3. Tunica externa

FIG. 40.4

1. Superior vena cava

Tunica media

3. Inferior vena cava

Pulmonary artery

2. Pulmonary trunk

4. Pulmonary veins

6. Aorta

Critical Thinking Application Answer

The left ventricle wall is thicker which provides a more powerful contraction to force the blood through the longer distance of the systemic circuit.

FIG. 40.5

1. Right common carotid artery

2. Right subclavian artery

3. Brachiocephalic artery

4. Aortic arch

5. Ascending aorta

6. Right renal artery

7. Right common iliac artery

8. Left common carotid artery

9. Left subclavian artery

10. Coronary artery (left)

11. Abdominal aorta

FIG. 40.6

1. Superficial temporal artery

2. Internal carotid artery

3. External carotid artery

4. Vertebral artery

5. Subclavian artery

6. Facial artery

7. Common carotid artery

8. Brachiocephalic artery

FIG. 40.7

1. Subclavian artery

2. Axillary artery

3. Deep brachial artery

4. Brachial artery

5. Radial artery

6. Ulnar artery

FIG. 40.8

Common iliac artery

2. External iliac artery

3. Deep femoral artery

4. Popliteal artery

5. Abdominal aorta

6. Internal iliac artery

7. Femoral artery

8. Anterior tibial artery9. Dorsalis pedis artery

FIG. 40.9

1. External jugular vein

2. Subclavian vein

3. Internal jugular vein

4. Vertebral vein

5. Brachiocephalic vein

FIG. 40.10

1. Axillary vein

2. Cephalic vein

3. Basilic vein

4. Median cubital vein

FIG. 40.11

1. Hepatic portal vein

2. Superior mesenteric vein

Gastric vein (right)

4. Splenic vein

5. Inferior mesenteric vein

FIG. 40.12

- 1. Inferior vena cava
- 2. Common iliac vein
- 3. Internal iliac vein

- 4. External iliac vein
- 5. Femoral vein
- 6. Great saphenous vein

Laboratory Report Answers

PART A

- Endothelium
 Middle layer (tunica
 - media)
- 3. Outer layer (tunica externa)
- 4. Vasoconstriction5. Vasodilation

- 6. Capillaries
- 7. Hydrostatic
- 8. Osmotic9. Valves

PART B

- 1. (sketches)
- 2. The inner and outer layers are similar in the artery and vein. The middle layer of the artery contains relatively greater amounts of smooth muscle and elastic tissue than that of the vein.

Critical Thinking Application Answer

Because arteries are under higher pressure than veins, the thicker arterial walls help to maintain the strength and elasticity necessary against their walls.

PART C

- 1. The blood in an arteriole moves with a pulsating rapid flow, but blood in a venule moves with a steady slower flow.
- 2. A capillary could be identified by its small diameter and the presence of blood cells moving in single file.
- 3. Blood moves fastest in arterioles, somewhat slower in venules, and slowest in capillaries.

PART D

1.	d	7.	h
2.	i	8.	j
3.	c		g
4.	a	10.	e
5.	f	11.	k

6. b

PART E

1.	a	5.	h
2.	b	6.	c
3.	d	7.	g
4.	e	8.	f

PART F (FIG. 40.13)

1 AK1 F (FIG. 40.13)							
1.	Common carotid artery	8.	Subclavian vein				
2.	Brachiocephalic vein	9.	Pulmonary vein				
3.	Superior vena cava	10.	Inferior vena cava				
4.	Femoral vein	11.	Aorta				
5.	Great saphenous vein	12.	Common iliac vein				
6.	External jugular vein	13.	Common iliac artery				
7.	Subclavian artery	14.	Femoral artery
